

Marine Structure Reconfiguration Guidance

This guidance applies to the modification of an existing marine structure that involves the rearrangement or orientation of the components comprising the entire marine structure. All Applicants desiring to shift the physical location of an unattached boat or PWC lift must submit an application and detailed schematic. All Applicants wishing to change the hinge location on a platform or gangway will be required to submit an application and detailed schematic of the new configuration. **ONLY** those wishing to change the configuration of a Type C dock will be required to submit a stamped drawing by a SC Professional Engineer. In the case of a proposed modification/reconfiguration to boat lift slides for a manufactured boat or PWC lift, the Applicant may substitute a schematic and certification from the original boat lift manufacturer (in lieu of a stamped drawing from a SC Professional Engineer) that specifies that the modifications, as proposed, do not compromise the structural or safety integrity of the lift.

Effective July 5, 2018
