Addendum 1

May 13, 2019

TO: ALL VENDORS

RE: TRUCK SCALES FOR BIOSOLIDS AREA AT FAIRFOREST

DUE: May 21, 2019 at 2:00 pm EST

Questions/Answers:

1. Concerning above ground modules that usually come on a flat bed, should vendors provide their own forklift?
   R: A forklift is available at the Fairforest location.

2. Where the scales are placed and in order to see the instrumentation of the scales weight, where will the homerun cable need to be run? How do you want it placed, in ground or above ground?
   R: We have enough cover to run the cable above ground to accommodate the instrumentation showing in the control room.

3. For the drain area, do you want to keep it wide open?
   R: Yes. Where the landing gear is it may need to be moved 4 – 8 inches forward.

4. Is Awarded vendor allowed to meet the truck and use Spartanburg Water’s forklift to offload?
   R: If delivery truck does not have a forklift, there is a forklift onsite.

Additional Information:

The drain under the truck on the loading pad handles runoff water.
The legal road weight is 20 tons though truck may handle 24 tons.

NOTE: All other provision of the BID shall remain unchanged. Vendors shall acknowledge receipt of the addendum by signing below and returning with proposal.
